

FUHR Door Locks

Multitronic Electromechanical Door Lock

881

The 881 is a fully electromechanical locking device, which provides the end user with the convenience of using a remote control key to gain access and to lock the door instead of the traditional key operation. It provides security, comfort and convenience, but is also strong, secure and durable. There are no additional installation costs and the lock is quick and easy to install. All components are included in the box and are integrated within the door itself, ensuring quick, simple and reliable on-site installation. Simply connect a plug to the cable.

- Remote controlled access for extra security
- Fully automatic multipoint electromechanical locking
- Aesthetically appealing
- Comes as a complete set

Unlocking from outside

- By radio control key
- Profile cylinder (in the case of a power failure)
- Finger print recognition (optional extra)

Unlocking from inside

- By the door lever
(panic function will release all locking points)
- Entry phone wall mounted switch (optional extra)
- Radio controlled key
