

# FUHR Door Locks 856/859 Additional Deadbolt

- Increased security
- Exceeds insurance companies' requirements
- Available in 35mm and 45mm backsets
- "FUHR Silver" protective finish

The additional deadbolt provides a second, independent lock on modified 856 or 859 locks, increasing security for the end user in line with insurance bodies' highest requirements. The modified locks have a slot in the faceplate to allow the bolt to be thrown and locate in an additional hook plate.

The lock fits above the handle at a comfortable height for simplicity of use. It can be operated internally by key or thumb turn, and locked externally by key. Alternatively, use a half cylinder to deny intruders an escape route.
