

Defender

The asymmetric end cap ensures a secure, weather tight seal for the window, tested to BS6375 part 1. Defender hinges have been proven to 30,000 cycles, unequalled in the industry. They are designed to accommodate normal window manufacturing tolerances, making them easy to install.

The Defender range now offers enhanced security. Enlarged hinge cap resists forcing and the fixing has been strengthened (products benefiting from these improvements bear the prefix 'E').

To fit PVC or aluminium systems requiring a hinge stack height of 13mm.

Austenitic hinges are available across the Securistyle range of friction stays, for use where corrosion resistance is critical.

Performs to BS7950 and Secured by Design when used in conjunction with Vector Excluder see page 152.

Window Handles
See pages 115 – 122

- BBA assessed
- GGF approved
- BS7950
- Accurate closure
- Smooth operation
- Long life
- Jigs available
- Secured by Design
- Easy friction adjustment without metal to metal contact
