871 Handle

Security with unhindered escape

The 870 type 8 multipoint lock with two steel round bolts meets the requirements of EN1125 (which applies to public buildings for example, where occupants may not be familiar with exit routes and hardware devices) when used in a single door along with a free running cylinder, from an approved source, and panic bar. The new double door version is also now available.

The 871 version is available for use when EN1125 compliance is not required, in a domestic residence for example. Then the lock can be used with specific lever/lever furniture. For handing purposes the 871 version is always viewed from the outside.

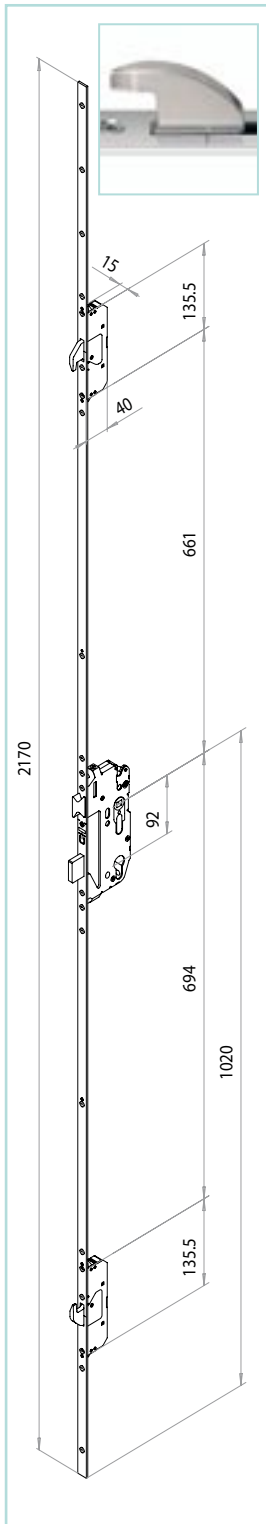

There are various options with single and double doors, as displayed in the tables below.

Description	Part No.	Box Qty
870 Single Leaf Door		
Lock Options	870 Type 8 EN1125 Emergency Exit – 2 Round Bolts (35mm)	42.3870.92.358 5
