

FUHR Door Locks

In-line Patio Door Lock

- Four anti-lift hook locks
- One piece keep
- Anti-slam as standard
- Reverse operation (where appropriate)
- "FUHR Silver" protective finish

To suit conventional British in-line sliding doors, the anti lift hooks move upwards to prevent the closed door from being lifted from the track. System specific one-piece locking keeps self-locate to ensure accuracy. On some systems reverse operation is appropriate, whereby the hooks are located on the keep, with recesses on the lock moving upwards to engage on the hooks.

In-line Patio Door Lock

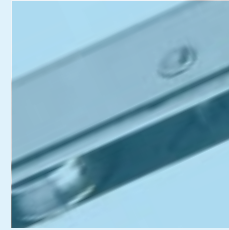

Technical data:

<i>Backset:</i>	25mm
<i>Centres:</i>	90mm
<i>Spindle:</i>	7mm
