

Panic Exit Hardware

FEB Superseries 95

Product Selection EN1125 or EN179

Selection of the correct product is essential for panic/emergency situations.

Please refer to our "Best Practice Guide" (available on request) for further information.

Products tested to EN1125 are for use in public places, schools, shops etc where a full width horizontal bar must be fitted.

Products tested to EN179 should only be used where the occupants of the building are familiar with the emergency exit and its hardware and where panic situations are not foreseen.

If in any doubt consult your local fire officer or building inspector or fit an EN1125 product.

Product Specification

The FEB Superseries 95 range is suitable for doors up to 2600mm high and up to 1600mm wide.

Available in white and silver polyester powder coated finish. Other colours available to special order.

Products are three point latching with centre latch and a choice of top and bottom or sideways locking.

Double Doors

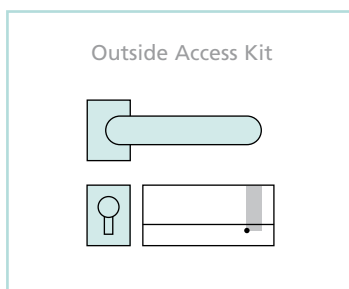

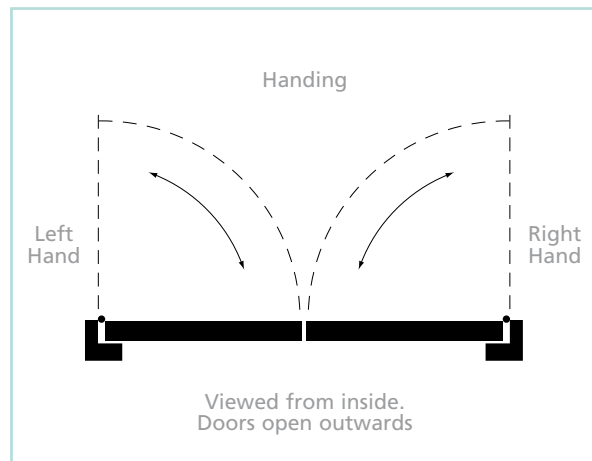

For double doors, use the sideways latching product on the master door and top and bottom latching on the slave door.

Striker Plates

A full range of profile related plates are available. Please advise material and profile when placing your order.

Outside Access

Outside Access Kit available. Kit comprises profile cylinder (choice of three sizes), lever handle and escutcheon plate.
